Actualmente la secretaria de la facultad de administración, finanzas e informáticas, en la oficina del secretario reposan varios archivadores los cuales contienen los archivos oficios recibidos oficios enviados, tiene resoluciones de consejo directivo y documentos que son dirigidos area el consejo directivo; en las pequeñas oficinas de las secretarias solo se encuentran las computadoras con las informaciones de acuerdo van llegando que se encuentras unas digitalizadas en la paginas del SAI y las que son físicas que luego son ordenadas de acorde la información que el estudiantes entregue, los espacios donde están en la actualidad reposando los archivos físicos del estudiante los tienes en ficheros que son el espacio de dos cuartos una más pequeños que el otro; en el primer espacio se encuentra la carrera de Ing. Comercial sus colores de carpeta son de color verdes para los estudiantes matriculados y de color amarillo para los graduados, además tienen folders negros donde su contenido tienen, Actas de Calificaciones , Actas de Grados, Informes de Exámenes Complexivo, resoluciones del consejo directivo, sustentaciones, en el cuarto más grande del extremo izquierdo se cuenta con varios percheros organizados por carrera, como por ejemplo Ing. Sistemas donde reposan información en carpetas de color naranja de graduados en sistemas, graduados en análisis en sistemas, graduados en electricidad, graduados en electrónica y telecomunicación usan carpetas de color roja (pero como con el pasar del tiempo se han venido deteriorando unas están con carpetas de color crema), matriculas de electricidad, matriculas de

Ing. en Sistemas de estudiantes retirados a media carrera, Actas de Calificaciones de Sistema Nocturno, Actas de Calificaciones de electricidad nocturno y vespertino, solicitudes de estudiantes, matriculas de periodo actual de Ing. Sistemas, Actas de Calificación de Ing. Sistemas, Matriculas de Sistema de Información su color de carpeta es de color rojo, en el mismo cuarto en el extremo derecho se encuentra la carrera de Contabilidad y Auditoría el color de la carpeta es de color azules las cuales contienen información del estudiante como: Graduados en Contabilidad y Auditoría, actas de calificación de Contabilidad y Auditoría, matriculados de Contabilidad y Auditoría, Oficios recibidos y enviados, contabilidad y Auditoría a distancia, archivadores varios(calificaciones del pre universitario, informe de escuela para aprobar la carrera de Ing. Sistemas).

#### 1.1.1 Porque es Importante

Es importante porque se enfoca en que el sistema permitirá mejorar el rendimiento de los trabajadores en especialmente para mantener los archivos antiguos a disposición de las secretarias o autoridades que necesitan de dicha información evita que en un futuro los archivos se deterioren.

Aplicando la tecnología en archivadores virtuales de documentación antigua hace que la universidad este avanzando cada día y mejorando su enfoque de ser una universidad de primera.

### 1.1.2 Que lo Hace Diferente

De acuerdo al análisis el uso de una aplicación web con interfaz amigable, ara que la información como tal sea de factible para encontrarla,

### 1.1.3 Contribución de la Propuesta

La propuesta influirá en eliminar físicamente los papeles archivados, facilitar la búsqueda en poco tiempo, se mantendría un ambiente sin documentos físicos, sin percheros, el medio ambiente no será lastimado por el uso de papeles y la información se mantendría en un lugar seguro.

También contribuye a la innovación de tecnología en las áreas que requieran subir información como son los departamentos de la Universidad o secretarias de las demás Facultades.

## 1.2 Establecimiento de requerimientos

Para identificar a detalle los requerimientos de sistema, se desarrolló una entrevista con la secretaria de la carrera de Ingeniería en Sistemas (LOOR RAMIREZ CARLOTA DALILA), con la finalidad de obtener información que permita la elaboración de un análisis del producto software. A continuación, se describe cada uno de los puntos analizados a través de las encuestas y entrevistas.

### 1.2.2 Requerimientos específicos funcionales

Observando el actual registro que se lleva las secretarías de dicha facultad, es necesario llevar un registro digital para evitar cualquier anomalía con el pasar del tiempo que los documentos se deterioren o que surja alguna pérdida de algún documento. En el actual sistema con el que se espera mejorar los procesos debe realizarse lo siguiente. El personal ingresaría por carrera, de acuerdo a lo que necesite lo encontraría de una manera ordenada alfabéticamente y también por el documento u oficio que se requiera.

### 1.2.3 Requerimientos específicos no funcionales

La información que se maneja en las secretarías se guarda en unas carpetas de papel las cuales ayudan a que los estudiantes guarden sus documentos por semestres, también existe otro tipo de oficios y documentos que se guardan en carpetas más reforzadas que se cuidan con mucha precaución y de un orden muy adecuado que se las pueden encontrar fácilmente, además existen algunos archivos que están en Excel y todos esos documentos se deberían tener como un respaldo virtual para evitar cualquier anomalía, sea de pérdida o deterioro.

### 1.2.4 Requerimientos Técnicos

Al momento de estar en funcionamiento el prototipo con las especificaciones correctas al momento de instalarlo para su evaluación se mostrará la mejora que obtendrá en sus debidas actividades, debido a que la información estará almacenada en un servidor estará siempre disponible para los usuarios permitidos, dando a entender que un sistema siempre genera seguridad, integridad y confidencialidad de la información.

### 1.2.5 Dominio de la información

La información que brinda las secretarías para que gestionen los archivos antiguos de una manera rápida y oportuna, ya que estos datos son guardados en archivos de pdf para luego ser extraídos y enviados a la base de datos. Lo que se quiere evitar es la búsqueda física que se venía haciendo, ósea en carpetas de cartón almacenadas por carreras.

Para ser más exactos la información que se tomara y almacenara no es más que los documentos que son de matrículas, homologaciones, oficio entre otros. Estos datos una vez almacenados en el sistema que permitan generar la documentación de una manera más rápida.

### 1.2.6 Justificación

Desde que sea creado la Facultad de Administración, Finanzas e Informáticas sea llevado el control manual de información de los estudiantes y de archivos que se generan en reuniones u otro tipo de actividad, por ello esta propuesta tecnológica pretende almacenar información física a digital que con el tiempo se puede deteriorar, tanto así que puede causar inconvenientes para la facultad y también a los estudiantes, pero eso se puede evitar implementando archivadores digitales que nos permitan escanear la información física y buscar de una manera rápida y oportuna al momento de generar el archivo.

## **CAPITULO 2. DESARROLLO DEL PROTOTIPO**

### **2.1 Definición del prototipo tecnológico**

Es un sistema web desarrollado en Php que se ejecutara en compañía de un scanner de alta velocidad modelo Epson generando en formato pdf y eso se almacenara a través de una base de datos Mysql en una intranet.

El sistema informático tiene como visión trabajar por medio de un scanner de alta velocidad para poder archivar las informaciones físicas en una base de datos Mysql, de esta manera se desea implementar el sistema que cada secretaria tenga ordenada su información en archivadores digitales por carrera, para que de esa forma tenga facilidad de búsqueda, evitar que se destruya la información física y que también la facultad este cada vez mejor organizada digitalmente.

Para poder desarrollar el sistema se deberá diseñar una interfaz amigable con el usuario, para que, de esa forma al momento de ejecutar la aplicación web, la información pdf escaneada más los metadatos que son definidos por cada información al momento de guardar, se ubique en el lugar que le corresponde dentro de la base de datos, haciendo que cuando sea el momento de búsqueda sea fácilmente encontrar.

### **2.2. Fundamentación Teórica del prototipo**

El sistema de aplicación web debe estar complementado con el scanner de alta velocidad para poder ejecutar la información que se desea digitalizar.

La información teórica incluida para el desarrollo del prototipo, detallará cada uno de los procesos, herramientas, métodos y programas que serán utilizados para entender el funcionamiento de todo el sistema.

### 2.2.1. Metodología

La metodología de levantamiento de información que se implementó para la propuesta tecnológica, fue a través de entrevistas que se le hizo a el personal de la secretaria de la Facultad de Administración, Finanzas e Informática donde se hizo: toma de fotos, revisión de los diferentes estantes que tienen la información, revisión de cada folder para saber su contenido, todo esto se a realizado debido a las necesidades que refleja la facultad.

### 2.2.2. Arquitectura

Es un conjunto de patrones que nos permiten diseñar nuestro sistema que se está desarrollando, en esta aplicación web se va usar la arquitectura de cliente/servidor esta nos ayudara estas nos permite trabajar en formas unidades o separadas, por ello ara entender mejor la estructura de arquitectura y arquitectura de software se debe entender de las definiciones.

La arquitectura (Lodoli, 2019) es una ciencia intelectual y práctica destinada a establecer a través del razonamiento el buen uso y las proporciones de los artefactos, y a través de la experiencia para conocer la naturaleza de los materiales que los componen.

En la actualidad, ( Cervantes , Velasco, & Castro , 2016)el software está presente en gran cantidad de objetos que nos rodean: desde los teléfonos y otros dispositivos que llevamos con nosotros de forma casi permanente, hasta los sistemas que controlan las operaciones de organizaciones de toda índole o los que operan las sondas robóticas que exploran otros planetas. Uno de los factores clave del éxito de los sistemas es su buen diseño; de manera particular, el diseño de lo que se conoce como arquitectura de software.

### 2.2.3 Cliente/Servidor

Un cliente- servidor no es más que la comunicación entre dos equipos que necesitan interactuar entre sí.

**Cliente:** es el que hace la orden que desea realizar desde una maquina

**Servidor:** es el que ejecuta la información pedida por el cliente la cual la transmite a través de una red sea local o de variarías redes locales.

## 2.2.4 Tecnologías

### 2.2.4.1 Escáner Doble Cara Fujitsu Fi-7160

Ofrece un rendimiento inigualable, gran velocidad y altas prestaciones para la captura documental. (Fujitson, 2013) Con unas velocidades de captura a doble cara de 120 imágenes por minuto a 300 ppp en color, en escala de grises y en blanco y negro, el fi-7160 protege sus documentos con sensores acústicos, garantiza que sus datos se escanean con tecnología de ultrasonidos inteligente y evita el reescaneado de las imágenes ya que da a los documentos la nitidez necesaria automáticamente con una sola pasada del papel. La fiabilidad se sigue mejorando con la nueva tecnología para corregir la alineación para un manejo excepcional del papel.

### 2.2.4.2 Lenovo ThinkSystem SR530 Server

El ThinkSystem SR530 (Lenovo, 2019) ofrece equilibrio entre rendimiento, capacidad y economía en factor de forma 1U. Los componentes esenciales para el rendimiento se ofrecen en una combinación diseñada para aumentar la eficacia de costos del sistema y permiten al SR530 satisfacer las necesidades de cargas de trabajo y de presupuesto de la empresa.

#### 2.2.4.3 PHP (Procesador de Hipertexto)

PHP es un lenguaje informático utilizado principalmente para escribir páginas web y darles forma.

(Marisol, 2019)

#### 2.2.4.4 MySQL (Gestor de base de datos)

MySQL es un motor que en comparación a Oracle DB es muy simple, su arquitectura es menos elaborada, pero es eficiente, fácil y rápido para algunos proyectos web, además de ser

OpenSource (no confundir con «gratis»). Por eso, esta guía debe tomarse con «pinzas» ya que, si bien se abarca una generalidad conceptual, el funcionamiento interno de las bases puede variar muchísimo. (Ortiz, 2015)

#### 2.2.4.5 Servidor XAMPP (Gestor de servidor)

XAMPP es un servidor independiente de plataforma, software libre, que consiste principalmente en la base de datos MySQL, el servidor Web Apache y los intérpretes para lenguajes de script: PHP y Perl. (Ecured, 2019)

#### 2.2.3.7 Netbeans (Gestor de Paginas)

Desarrolla rápido y fácilmente las aplicaciones desde escritorio, móviles y web con Java, JavaScript, HTML5, PHP, C/ C++ y más. (netbeans, 2017-2019)

### **2.3.0 Objetivo General**

- Mejorar el servicio institucional de la Facultad de Administración, Finanzas e Informático, automatizando el sistema de archivos.

#### 2.3.1 Objetivos Específicos

- Desarrollar un sistema informático web para la gestión de archivos históricos.
- Facilitar la búsqueda de los archivos históricos mediante un gestor de base de datos.
- Diseñar una interfaz sencilla, dinámica, para el manejo de la información y su rendimiento.

## 2.5. Conclusión

Como resultado de la propuesta tecnológica se concluye lo siguiente:

- Se puede desarrollar un sistema informático web para mejorar la gestión de archivos digitales
- Permite búsquedas rápidas de cada archivo histórico mediante el uso de un gestor de base de datos
- Utiliza un diseño sencillo y dinámica, para el manejo de la información y su rendimiento

## 2.6 Recomendación

- Se recomienda implementar el gestor de archivo en todas las dependencias o facultades de la universidad técnica de Babahoyo para optimizar espacio físico y tiempo de búsqueda
- Destinar un servidor centralizado que estaría en el departamento de sistema, debido que cuenta con todas las implementaciones que esta requiere tales como: sistema de climatización, sistemas de UPS con banco de energía, generador de energía, sistema de detección de incendios, sistema de extinción de incendios, cámara de video de vigilancias, biométricos de accesos, etc.
- Permitir crear accesos públicos en la Intranet, Internet de la Universidad, consultas del gestor de Archivos para beneficios de los estudiantes activos, pasivos, graduados.

# Anexo 1

1. Cuál es el tiempo que se demora atender un requerimiento de su sistema de archivos (matriculados, graduados. calificaciones entre otros).

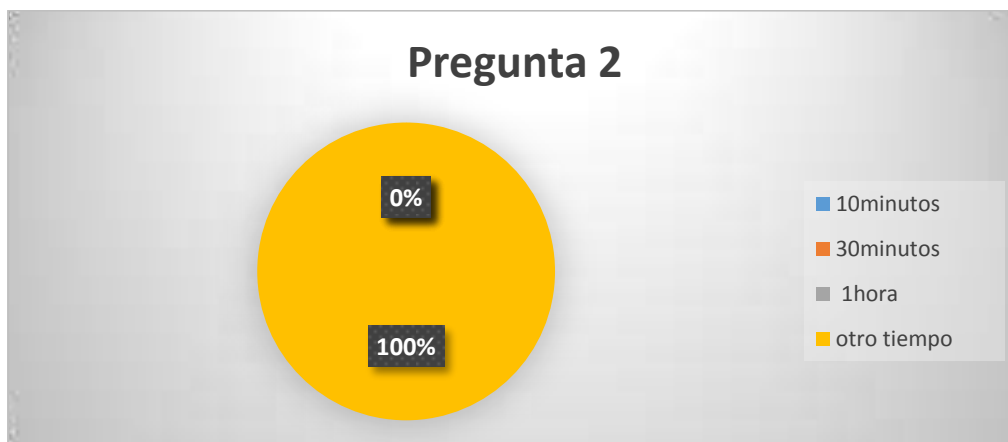

Menos de 1 hora  Menos de 2 horas  Menos de 4 horas

Dado los resultados de esta pregunta existe un 50% de que se encuentre en menos de una hora y otro 50% en dos hora siendo así en la aplicación se puede tardar mucho menos en atender un requerimiento.

2. Que tiempo se demora en realizar la búsqueda manual

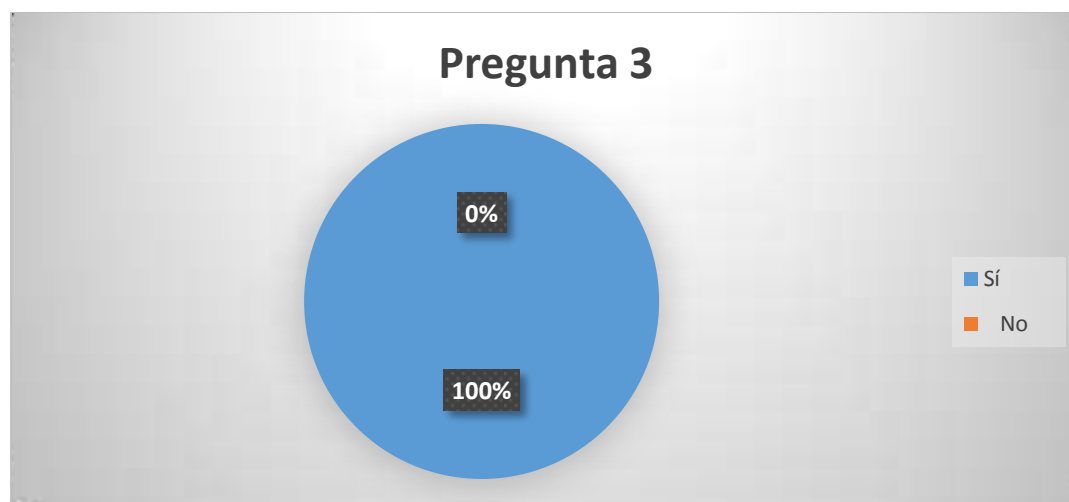

10minutos  30minutos  1hor  otro tiempo

Observando el resultado de búsqueda de algún archivo nos encontramos con un resultado de tiempo pasado de más de una hora, se puede tardar hasta días en encontrarlos, es por ello que la busque en el sistema de gestión de archivos va a facilitar la información en el momento.

3. Les gustaría automatizar el sistema de búsqueda manual por un sistema automático.

Sí  No

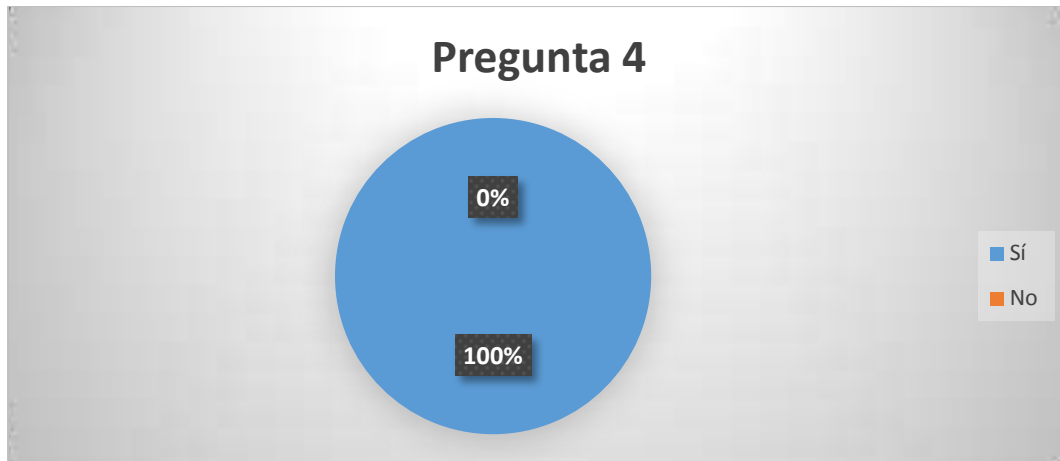

Observando el resultado favorable de las personas que si quieren un sistema de archivos digital, pues me permito decir que si es necesario implementar un archivador digital.

4. Le gustaría que su la aplicación de digitalización de documento se en base a una página

web.

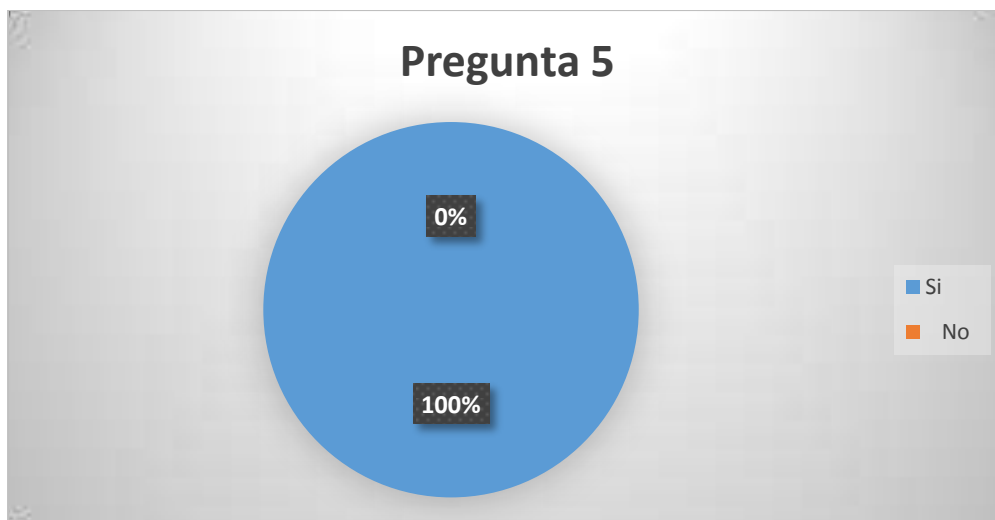

Sí No

Siendo un si por respuesta de la pregunta emitida, nos permitirá que el trabajo de usar una página web deba de ser muy amigable con el usuario, para que le permita gestionar su información requerida.

5. Usted ha trabajado con las impresoras scanner de alta velocidad

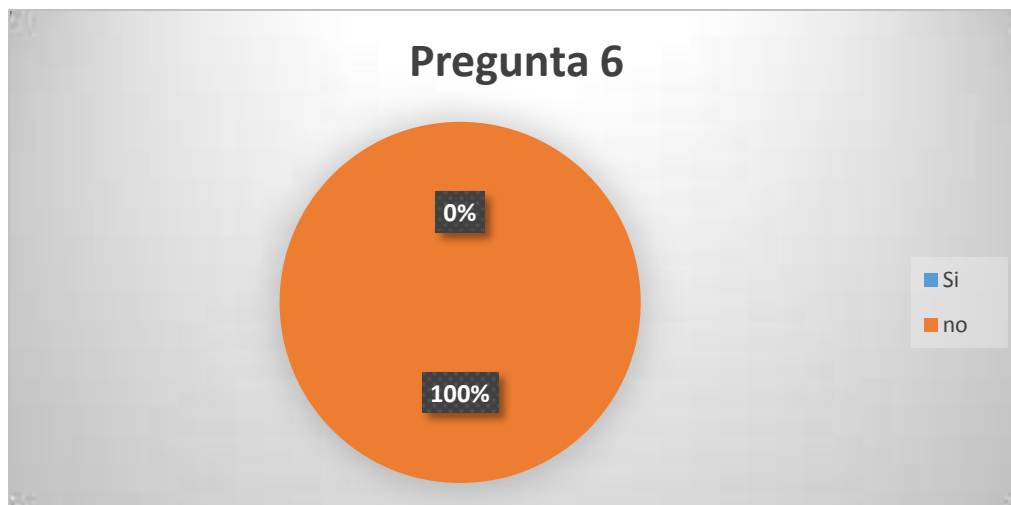

Si  No

No va ser tan complicado incorporar una impresora escáner de alta velocidad en el ambiente de trabajo, porque las personas si están familiarizadas con ellas.

Usted conoce sobre aplicaciones de gestores de archivo

Sí  No

Es algo casi obvio que no conocieran sobre el sistema, pero como en las preguntas anteriores si están predispuestas a utilizar un medio digital para gestionar archivos en pdf, esta respuesta nos permitirá el acceso de capacitarlas y de esa forma se podrá implementar el gestor de archivos por tener una interfaz muy amigable con el usuario.
